JOHN GULLIVER

Web Developer · Website Replication & Frontend Implementation

Philippines · Available for remote work

PROFILE

Detail-oriented web developer experienced in building responsive websites, interactive interfaces, and e-commerce experiences. Strong in HTML, CSS, JavaScript, semantic structure, responsive implementation, accessibility, and testing. Able to study an existing website carefully, reproduce its visual behavior, transfer content accurately, and test the result across screen sizes.

RELEVANT CAPABILITIES

- Replicating website layouts and responsive visual systems from an existing reference
- Implementing accurate page structure, typography, spacing, colors, interactions, and content
- HTML5, CSS3, JavaScript, responsive design, semantic markup, and accessible controls
- Testing layouts and interactions on desktop and mobile; troubleshooting usability issues
- Independent project delivery using Git, GitHub Pages, and lightweight automated testing

SELECTED PROJECTS

LOOT — Interactive 3D Storefront

Tools: Three.js, JavaScript, Node.js

- Built a responsive merchandise experience with product-selection state, 3D inspection, keyboard and pointer controls, reduced-motion support, and automated tests.

MIZRACH PINAZ — Music & Culture Homepage

Tools: HTML, CSS, JavaScript

- Translated a distinct visual direction into a responsive promotional website with custom typography, gradients, motion, music, tour, gallery, and booking content.

Ice Cream Invitation — Interactive Campaign Page

Tools: HTML, CSS, JavaScript

- Built a mobile-aware page with playful interaction, accessible form flow, visual feedback, and animation timing tailored to a clear user goal.

John Gulliver Portfolio — Deployed Website

Tools: Next.js, TypeScript, GitHub Pages

- Built and deployed a recruiter-facing site with responsive layout, focused project pages, metadata, type checks, linting, and build-based tests.

TECHNICAL SKILLS

- **Web:** HTML5, CSS3, JavaScript, TypeScript, React, Next.js
- **Design:** Responsive design, visual matching, typography, spacing, motion, mobile-first refinement
- **Quality:** Semantic markup, accessible controls, keyboard and pointer UX, usability testing
- **Delivery:** Git, GitHub Pages, Node.js, automated testing, deployment and documentation

WORK APPROACH

Carefully inspect the reference site, identify its reusable patterns, implement the structure and styling, transfer content accurately, then test responsive behavior and usability before delivery.

PORTFOLIO

dekuding1129.github.iogithub.com/Dekuding1129

AVAILABILITY

Available for remote website-development projects and able to work independently while meeting agreed deadlines.
